

The 3.0.2 HOT FIX provides the following issue resolution:

- Data is displayed as expected in Form View, even if the tab order is modified for the current form.

The 3.0.2 HOT FIX is cumulative and includes the following issue resolution from the previous 3.0.1 HOT FIX:

- Users can successfully use the option for setting image resolution (DPI) during petrification.

NOTE: You must be on at least version 3.0 of the CT Summation iBlaze product family to apply this HOT FIX. You can determine what version you are running by going to *Help > About CT Summation* from within the program. If you are running a version that precedes version 3.0, please contact Product Support for more information.
