

The following issues have been resolved in version 3.1 of AD Summation WebBlaze.

- Assigning a sub-issue to a database record now behaves as expected when adding issues from the Add Multi-Entry dialog in the Form View.
- The Form View now stays in sync with the Column View when sorting is applied to a record set in the Column View.
- Transcript Notes created in WebBlaze are now viewable in iBlaze (and vice-versa) for transcripts whose filenames exceed 8 characters or contain spaces.
- The Tag View opens properly and Issues, Categories, and Folders are assigned properly when using WebBlaze with Internet Explorer 8.
- eDocs and Attachments are now consistently viewable in the Preview mode of the eDocs Viewer when accessing WebBlaze from outside the Local Area Network.
- WebBlaze now prompts to commit changes made to a record when the "Prompt to Save Record" option is enabled and a new field is added to the Column View.
- Valid transcript files now load properly when loaded through the WebBlaze interface.
